

# Talmud Navigator in Excel

## Printing Output

The initial default print range is the full text of the file. Partial or condensed text can be printed by clearing the present range and defining the print range on any row from line 17 (below the heading). You can do this by in the "Print Area" button on the "Page Layout" Tab. Heading and margin settings have been predetermined.

## Key

Below this line are the text and charting sections of Talmud Navigator. These are defined and explained in the guidelines for using the Talmud Navigator PDF - see [www.ohr.edu/5543](http://www.ohr.edu/5543)

## Condensation Options.

Condensation options are activated by clicking on one of the blue arrows in column K. The type of condensation is defined in column L.

## Define the Range.

If the excel file contains more than one perek click here (A4) before performing any of the condensations.

**Condensation by anchor points** is activated by clicking here (C6).

Click here (A8) to go to a list of **Review Questions**.

**Return to the full text** by clicking here (A12).

**Personal Anchor Points.**

## Instructions for use of Excel Format

An abstract ([www.ohr.edu/5544](http://www.ohr.edu/5544)) includes a description of the Module including sources, developments and applications.

## Condensation Options

The Excel Format enables creating a wide range of condensation options from the full text of the 'sugya' for the purpose of review and self-testing. These options are activated by "clicking" on one of the graphics (blue arrows) appearing in column K. The type of condensation is defined in column L. Return to full text - by "clicking" on the graphic A12 (large right arrow).

## Personal Anchor Points

The Excel format enables creating personal anchor points determined by the learner himself to facilitate his own review, being as sparse or as detailed as needed for memory and comprehension.

A segment is labelled as an anchor point with a diamond symbol in column L. Condensation by anchor points is activated by "clicking" on graphic c6 (next to the diamond symbol).

Note that the full text of the Mishna is included with this condensation.

The initial text presentation already includes anchor points noting the main flow of the sugya. These can be altered and others added by copying the diamond symbol to column L.

## Define the Range

The above condensation options and personal anchor points relate to each 'perek' separately. In case the seven 'daf' file contains 'dapim' from more than one 'perek', the file would include a separate sheet for each 'perek'. Before performing any of the condensations on the text of each 'perek' (sheet) the range has to be defined by simply "clicking" on the graphic A4 (green arrow).

## Review Questions and Links to Answers

A list of questions on the seven 'daf' weekly material can be accessed by "clicking" on graphic A8 (yellow arrow). The graphic (blue arrow) to the right of each question is a link to the full text in the Gemara which provides the answer.

## Important Note:

This module should be used after learning the Gemara, for the purpose of clarification & review.
